

This project was approved under the Self-Certification Program. City staff did not perform a plan review and the self-certified professional has taken responsibility for compliance with all city adopted codes and ordinances. All construction must conform with the permit record set, as identified with "Official Construction Set" stamp from City of Phoenix. The permit record set must also include the self-certified professional's stamp and be sealed by all applicable design professionals.

Any deviations from the permit record set must be approved in advance by the field inspector; proposed revisions must be sealed by the applicable design professional; and contain the Self-Certified Professional's stamp.

All voluntary and mandatory field changes shall comply with the City of Phoenix Planning & Development's Field Change & Revisions Procedure:

[Field Change & Revisions – Procedural Guideline](#)

No inspections will be performed until the revised city stamped plans are available to the inspector.

Designs found to be in violation of any city adopted codes and ordinances through a subsequent audit or by the inspector must be corrected.

Field changes that increase scope or area require a separate permit.
