

Oak Street: 3rd Street to Grand Canal

Construction Field Change

Design Concept (Pre-Construction)

Conflict:

During construction it was discovered that the design concept would prevent proper drainage of storm water.

Resolution:

To avoid any issues with drainage, the design concept was modified to allow the passage of storm water between the sidewalk and the chicane / island.

Actual (Post-Construction)

Similarities between Design Concept and Actual:

- Narrowing of the roadway cross-section
- Location for landscaping and irrigation
- Upgraded curb ramps to meet ADA (Americans with Disabilities Act) standards

Differences between Design Concept and Actual:

- Travel distance for pedestrians not reduced

*Note - Landscaping not completed at time of photo
